

DANIYAL KHALIL

☎ +92-3700122633 ✉ daniyalkhalil968@gmail.com 🌐 github.com/daniyal-khalil-01

Professional Summary

Computer Science student with strong interest in Artificial Intelligence, Computer Networks, and Cyber Security. Building practical software projects while developing foundations in programming, algorithms, databases, and system concepts. Interested in intelligent systems, secure computing, and networking technologies through continuous learning and implementation.

Education

Quaid-i-Azam University, Islamabad

Bachelor of Science in Computer Science

2026

Islamabad, Pakistan

Technical Skills

Languages: C++, C, Java, Python, JavaScript, Kotlin

AI: AI Fundamentals, Intelligent Agents, Search Algorithms (BFS, DFS), Problem Solving

Cyber Security: Security Fundamentals, Authentication, Cryptography Basics, Network Security

Networks: TCP/IP, OSI Model, Network Protocols, Client-Server Architecture

Web/Mobile: HTML5, CSS3, Tailwind CSS, Android Development, Jetpack Compose

Databases: SQL, SQLite, Room Database

Tools: Git, GitHub, VS Code, Android Studio, Linux

Projects

Code Quality & Fault Prediction System | React, TypeScript, Flask, SQLite, Machine Learning

- Built a full-stack platform to analyze GitHub repositories and predict fault-prone modules.
- Calculated cyclomatic complexity, maintainability index, and code churn in the backend.
- Used a Random Forest model to estimate fault probability and support test prioritization.

Automated Trading Platform | Trading Automation, System Design

- Engineered a trading automation platform to streamline trading workflows and improve operational efficiency.
- Designed core system logic to manage trading processes with a focus on reliability and maintainability.

Faulty House Management System (FHMS) | Java, OOP, Collections Framework, MySQL

- Built a Java-based FHMS to automate faculty housing applications, eligibility checks, and allocation workflows.
- Implemented rule-based assignment logic (rank/seniority + application time) with status tracking to ensure fair and transparent house distribution.

CI/CD Automation Framework | DevOps, Deployment Automation

- Delivered a DevOps-focused project centered on deployment automation and release workflows.
- Applied continuous integration and deployment concepts to improve development efficiency and consistency.

University Computer Science Department Website | HTML, Tailwind CSS, Bootstrap

- Designed and developed the university's Computer Science department website using WAD technologies.
- Built a responsive and structured academic website to present department information clearly and effectively.

Library Management System | Programming, Database

- Built a system for managing books, users, and issue/return operations.
- Applied object-oriented programming and database operations for record management.

Android Application Projects | Kotlin, Android Studio, Room Database

- Built Android applications using Kotlin with Room-based local storage and CRUD functionality.
- Practiced clean app structure and separation of concerns in mobile development.

Relevant Coursework

- Data Structures
- Algorithms
- Database Systems
- Software Engineering
- Artificial Intelligence
- Operating Systems

Additional Information

- Strong interest in software development, artificial intelligence, networking, and cyber security.
- Comfortable learning new technologies through documentation and practical projects.
- Interested in building scalable and secure software solutions.
